N. MECC. MI 018636 - C.C.I.A.A. MILANO N. 1170974

Brescia, February 2015

To: **ALL O.R.I. MARTIN's CUSTOMER**

For the attention of: **Quality Manger**
Health & Safety Responsible

Object: **Radiation Protection Information**

We wish to provide you with some information regarding the radiation protection devices, all periodically verified / calibrated, which have been introduced by ORI MARTIN in order to control the process and the product:

- There are some devices with high-sensitivity plastic scintillation detectors, according to the Italian standard UNI 10897, which are used for the detection of potential radio-active sources in the loads of the scrap-carrying vehicles entering the site and during the charging of the scrap into the Electrical Arc Furnace (E.A.F.);
- There are some devices that check the radioactivity level during the steelmaking process;
- There is a device, by gamma rays with detector type NaI of 3", that measures the radioactivity level of the manufactured steel.

The above mentioned controls guarantee the prescribed limits stipulated by Italian law (D.Lgs n° 230 on 17 March 1995 and the subsequent modification and integration of D.Lgs n° 23 on 20 February 2009) and European Regulations (guidance "Radiation Protection 122 part I") and in particular the clearance level for Co-60 nuclide is $\leq 0,1$ Bq/g .

The radioactivity control devices were introduced in 1998 and, to date, no radio-active contamination has been found in on our steel products.

We are at your disposal for any further information.

Best Regards

O.R.I. MARTIN S.p.A.
